**Subject:** Application for Backend software engineering internship 2024

Dear Wolt Team,

I am excited to apply at Wolt for the Software engineering intern position as a Python backend developer. With prior experience in full-stack and backend development, I am eager to contribute my skills and dedication to your team. I am studying bachelor's degree in Information and Communication Technology at JAMK University of Applied Sciences. I am planning to graduate in the year 2025.

As a curious person, I started tinkering with computers from my childhood. I have learned to program using online materials. It is my motivation and curiosity, that have helped me to learn about the technologies and strive for more in the future. Last summer I worked as a Junior backend engineer at WIMMA LAB, which allowed me to try the Express.js framework and Prisma ORM. Before that, I worked as a solo full-stack developer for Rivia. My previous journey as a professional, in my opinion, makes me a good candidate and asset for this position.

I have heard a lot of positive things about your company, the ones that got me most interested are people are eager to learn and teach. Mentors are always there to help if there is any help needed. My future goal is to develop scalable, maintainable and useful backends.

I am looking forward to discussing any further questions you might have in the next round.

Kind regards

Iftakhar Husan
